

Perform all Experiments**List of Experiments:**

1.
 - a) Implementation of Python Basic Libraries such as Statistics, Math, Numpy and Scipy
 - b) Implementation of Python Libraries for ML application such as Pandas and Matplotlib.
2.
 - a) Creation and Loading different datasets in Python
 - b) Write a python program to compute Mean, Median, Mode, Variance, Standard Deviation using Datasets
3.
 - a) Write a python program to compute reshaping the data, Filtering the data , merging the data and handling the missing values in datasets
4.
 - a) Write a Python program to implement Simple Linear Regression and plot the graph.
 - b) Implementation of Multiple Linear Regression for House Price Prediction using sklearn
5. Implementation of Logistic Regression for iris using sklearn
6. Implementation of random forest algorithm
7. Implementation of naive bayes classifier algorithm and plot the graph.
8. Implementation of SVM classification and plot the graph.
9.
 - a) Implementation of PCA
 - b) Implementation of LDA.
10.
 - a) Implementation of k-means clustering.
 - b) Implementation of hierarchical clustering
