

- a) Write a python program to compute reshaping the data, Filtering the data ,
merging the data and handling the missing values in datasets
4.
 - a) Write a Python program to implement Simple Linear Regression and plot the graph.
 - b) Implementation of Multiple Linear Regression for House Price Prediction using sklearn
5. Implementation of Logistic Regression for iris using sklearn
1. Implementation of random forest algorithm
2. Implementation of navie bayes classifier algorithm and plot the graph.
3. Implementation of SVM classification and plot the graph.
9.
 - a) Implementation of PCA
 - b) Implementation of LDA.
10.
 - a) Implementation of k-means clustering.
 - b) Implementation of hierarchical clustering

Course Code- 119306P**Materials, Testing & Evaluation Lab
Perform any 10 Experiments****0 0 2 1****List of Experiments:**

1. Gradation of coarse and fine aggregates
2. Different corresponding tests and need/application of these tests in design and quality control
3. Tensile Strength of materials & concrete composites
4. Compressive strength test on aggregates
5. Tension I - Elastic Behaviour of metals & materials
6. Tension II - Failure of Common Materials
7. Concrete I - Early Age Properties
8. Concrete II - Compression and Indirect Tension
9. Compression – Directionality
10. Consolidation and Strength Tests
11. Tension III - Heat Treatment
12. Torsion test
13. Hardness tests (Brinell's and Rockwell)
14. Tests on closely coiled and open coiled springs
15. Theories of Failure and Corroboration with Experiments
16. Concrete Mix Design as per BIS
