

Mapped CO(s) Number	Practical/ Lab Session Outcomes (LSOs)	Laboratory Experiment/ Practical Titles
CO1&CO2	<i>LSO 1.1</i> Measure the wavelength of a given light source using a plane diffraction grating	LE- 1 Diffraction Grating.
CO1	<i>LSO 1.2</i> Measure the wavelength of given monochromatic light source using Newton's Ring Experiment <i>LSO 1.3</i> Measure the radius of curvature of the given plano-convex lens using Newton's Ring Experiment.	LE- 2 Newton's Ring Experiment
CO1	<i>LSO 1.4</i> Determine the resolving power of a given telescope	LE- 3 Resolving Power of Telescope
CO1	<i>LSO 1.5</i> Determine the specific rotation of cane sugar solution using a polarimeter	LE- 4 Polarimeter
CO2	<i>LSO 2.1</i> Determine the Numerical Aperture of given optical fiber	LE- 5 Numerical Aperture Optical Fiber (Virtual Lab)
CO3	<i>LSO 3.1</i> Measure the dielectric constant of given dielectric materials	LE- 6 Dielectric Constant
CO4	<i>LSO 4.1</i> Determine the value of Planck's constant using a photocell.	LE- 7 Measurement of Plank's Constant
CO4	<i>LSO 4.2</i> Determine the wavelength of a given electron beam.	LE- 8 LE-8 Stern-Gerlach Experiment (Virtual Lab)
CO5	<i>LSO 5.1</i> determines the I-V characteristic of a given p-n junction diode	LE- 9 p-n junction
CO5	<i>LSO 5.2</i> Determine hole and electron density in given semiconductor	LE- 10 Hall effect experiment
CO5	<i>LSO 5.3</i> Use four-probe method to determine the resistivity of the given semiconductor material	LE- 11 Energy Band Gap Measurement
CO5	<i>LSO 5.4</i> Demonstrate the change in absorption of light on changing size of nanoparticle	LE- 12 Changing nanoparticle size alters light absorption.
